

maintenance needs. Easy to apply with a microliner pen, it minimises downtime and cuts costs by extending nozzle life. Safe, odourless, and residue-free, it ensures efficient, clean soldering and improves overall production reliability.

Automated rework system

ZEVAC's ONYX 1000 is a fully automated, all-in-one rework system on a large platform, completing removal, cleaning, solder paste dispensing, and placement with a single click.

Designed for industries needing accuracy and reliability, it features motorised axes, multi-tool heads, automatic feeders, and optional inspection and dispensing, ideal for aerospace, medical, automotive, and prototyping environments.

TEST & MEASUREMENT

Telecentric measurement system

The KEYENCE TM-X5000 series telecentric measurement system offers precise, fast inline inspections with exceptional accuracy and clarity. Its dual telecentric optics eliminate focus errors and distortion, enabling reliable measurement on moving parts.

Supporting multiple simultaneous measurements and detecting minute defects, it fits tight spaces with flexible mounting. Pre-calibrated and easy to integrate, it is ideal for automotive, electronics, medical, and industrial uses.

Digital multimeters

Rohde & Schwarz's new R&S UDS

digital multimeter series offers precision, versatility, and ease of use,

replacing the older HMC8012 model. They measure high voltage and current, feature multiple interfaces for automated testing, support remote control, and include advanced math and statistical functions—perfect for industrial and educational use.

Arbitrary waveform generators

Spectrum Instrumentation's new DN2.63x series ultrafast arbitrary waveform generators deliver up to ten billion samples per second with high 16-bit precision. Compact and lightweight, they support Ethernet control for seamless integration with PCs or networks. Ideal for remote and automated tests, these AWGs generate signals up to 2.5 gigahertz.

AUTOMATION

Multi-function indicator and alarm unit

Brainchild Electronics' IA10 multi-function indicator and alarm unit enhances industrial automation by integrating precise data display, real-time calculations, alarm management, and communication. With dual sensor inputs and a bright LCD backlight, it captures subtle signals and supports temperature and linear sensors. Its flexible functions include arithmetic operations, multiple alarms with relay outputs, and seamless connectivity via Modbus.

MISCELLANEOUS

'Made in Bharat' power adaptors

Consistent Infosystems introduces its new universal adaptor series under the 'Made in Bharat' initiative, designed to power electronics like DVRs, security cameras, and routers. Equipped with multiple safety protections, they ensure reliable, safe operation in both home and commercial settings, reflecting a commitment to innovation and quality.

Modular health system

Ambiq teamed with CardioMedive to create the Medive platform, a modular health system powered by Ambiq's ultra-low-power Apollo microcontroller. Featuring energy-efficient technology and edge AI, Medive supports various cardiovascular monitoring tools—such as ECG, blood pressure, oxygen, and temperature sensors—while enabling weeks of continuous data collection without requiring frequent charging.

Color E-paper display

Samsung's new Color E-paper display blends energy savings with vibrant visuals. Lightweight and slim, it is easy to place on walls, tables, or ceilings. It consumes zero power for static images and operates even without a power outlet, thanks to its built-in battery. Designed with recycled materials, it helps businesses shift from paper to digital while reducing energy and environmental impact.
