Global Semiconductor Sales See 23% YoY Rise In 1Q25

The global semiconductor industry exhibited strong momentum in Q1 2025, with IC sales up 23% YoY despite a 2% QoQ dip. Logic ICs led revenue, and memory ICs nearly doubled 2023 levels by Q2. CapEx rose 27% YoY, while wafer capacity expanded from 39,000 to 44,000 wafers/month. Taiwan and Japan drove growth, backed by government-supported foundry projects.

Global Smartphone Sales Forecasted To Grow Just 0.6% In 2025

Global smartphone shipments are set to rise by just 0.6% YoY in 2025 to 1.24 billion units, down from an earlier 2.3% growth forecast. A modest 1.4% CAGR is expected through 2029. China (+3%) and the US (+1.9%) will drive growth, while tariffs, inflation, and subsidy limits—especially impacting Apple—threaten pricing and supply chains amid market saturation and longer upgrade cycles.

AI Chip Market Rockets Toward \$100 Billion Despite Industry Setbacks

The AI chip market is projected to hit \$100 billion by mid-2026, after growing from \$53.66 billion in 2023 to \$91.96 billion in 2025. Driven by generative AI and cloud demand, it is gaining nearly \$20 billion yearly. Yet, major firms like Nvidia and Google lost over \$400 billion each, with total sector losses hitting \$1.1 trillion in 2025.

Global TWS Shipments Grew 18% YoY In 1Q25

The global true wireless stereo (TWS) market rose 18% YoY in Q1 2025, hitting 78.3 million units—its fastest growth since 2021. Apple led with 23.3% market share, followed by Xiaomi (11.5%), Samsung (7.1%), Huawei (6%), and boAt (4.9%). Growth was driven by expansion in emerging markets and rising interest in open-ear wireless stereo (OWS) designs.
