

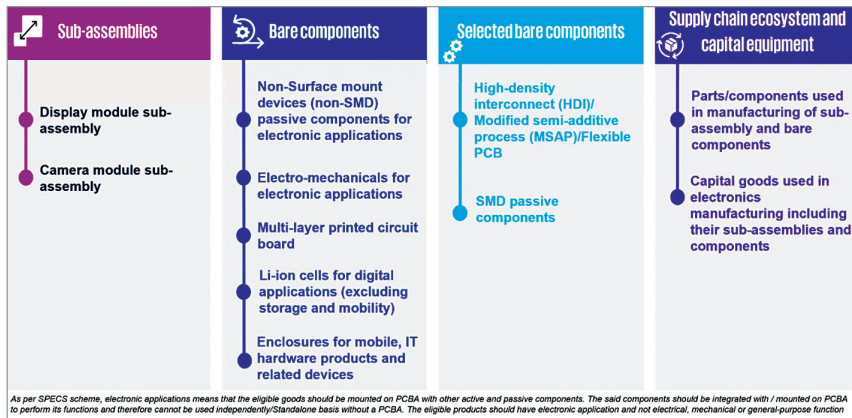

Fig. 5: Target segments

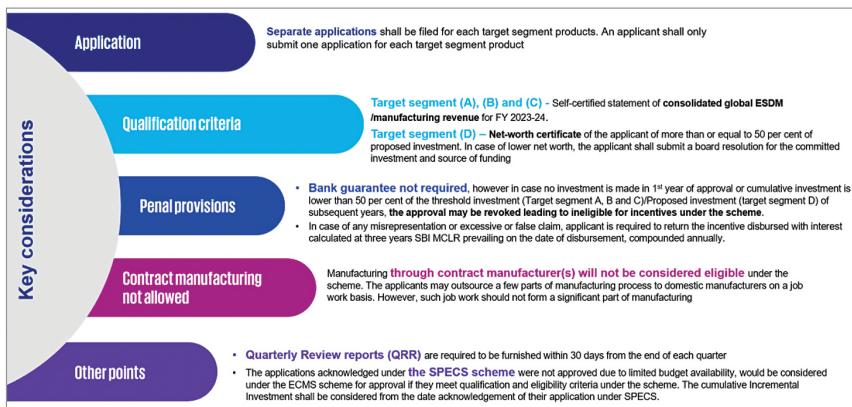

Fig. 6: Key considerations

- For calculating incremental sales, FY 2024-25 is the base year. If a one-year gestation period is chosen (only for target segments A, B, and C), then FY 2025-26 will be the base year.

- Baseline sales refer to net sales of goods manufactured in India during the base year, including those by the applicant, group companies, or joint ventures.

- Net incremental sales are the difference between net sales during the incentive period and those in the base year.

- Employment is measured as the average number of persons employed (direct and contractual) monthly over 12 months.

- Eligible investments include plant, machinery, equipment, associated utilities, R&D, and technology

transfer.

- Ineligible investments include land, buildings, consumables, and raw materials.

Incentive structures: Tailored for impact

The ECMS features a total incentive outlay of ₹228.05 billion (excluding administrative expenses), of which ₹210.93 billion is earmarked for target segments A, B, and C, and ₹17.12 billion for target segment D. Incentives are disbursed on a first-come, first-served basis upon submission of eligible claims.

There is an overall incentive ceiling of 50% of the cumulative eligible incremental investment during the scheme's tenure, excluding additional incentives for specific products.

kurtz ersa

Ersa HOTFLOW ONE

The powerful entry model with small footprint

Ersa HOTFLOW THREE

The high-end reflow oven for all applications that sets the benchmark

Ersa EX05

Void-free reflow soldering with convection and vacuum

Benefit from the technological advantages of Kurtz Ersa reflow ovens and the added values of the world market leader in soldering machines and systems. Contact us for application consulting, a visit or an offer!
