Introducing Arduino

UNO ६ R4

Arduino® UNO ६ R4 WiFi

Powered by the Renesas RA4M1 and ESP32-S3, this board offers built-in **Wi-Fi®** and **Bluetooth®** for effortless connectivity. With a **12x8 LED matrix** and **Qiwic connector**, it's designed for rapid prototyping and expansion.

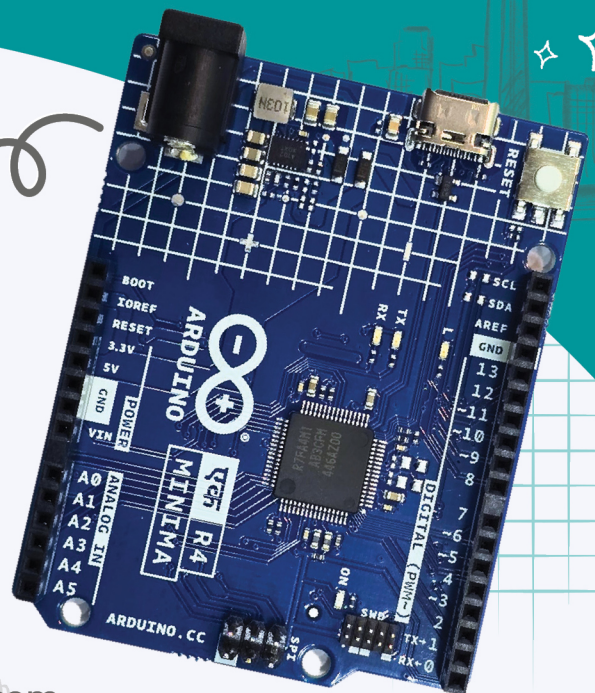

An ideal choice for IoT, automation, and connected projects—blending reliability with modern innovation.

Arduino® UNO ६ R4 WiFi

This board boasts the RA4M1 microprocessor from Renesas, delivering **increased processing power, expanded memory**, and additional peripherals. And the best part? It stays true to the reliable UNO ६ form factor and operates at a practical 5V voltage.
