Made-In-India Drones For Defence

Optimus Unmanned Systems has launched four cutting-edge drones to bolster India's defense and advance

Make-in-India. These include a VTOL drone for high-altitude surveillance, a multirotor for tactical reconnaissance, a loitering munition for precision strikes, and FPV drones using optical fibre cable navigation to counter electronic warfare. Applications span surveillance, reconnaissance, and attack missions, with features like AI analytics, EOIR cameras, long-range control, and flexible deployment from various platforms.

High-Speed CAN FD Transceiver

NOVOSENSE Microelectronics has launched four advanced CAN transceivers and a stepper motor driver in Europe, targeting critical automotive applications. Designed for robust ECU communication in body control

modules, gateways, ADAS, and infotainment systems, the transceivers offer EMI suppression. Certified to stringent European EMC standards, these solutions support CANopen, DeviceNet, and other CAN protocols for reliable performance in demanding automotive environments. NOVOSENSE Microelectronics

1.5MP Global Shutter Sensor

OMNIVISION's OX01N1B is a compact, 1.5MP global shutter image sensor optimised for automotive driver monitoring systems (DMS).

Leveraging Nyxel NIR technology and OmniPixel4-GS, it delivers excellent low-light performance and distortion-free motion capture. It fits varied automotive designs. Its low power use, ASIL-B safety, and integration flexibility make it ideal for next-gen, regulation-ready DMS applications worldwide. OMNIVISION

1.2kV SiC MOSFETs

NoMIS Power's upgraded 1.2kV planar SiC MOSFETs offer significant application advantages, including 20% lower on-resistance and improved efficiency. Their low input capacitance and robust 50nm gate oxide enable high-frequency operation and improved reliability. These advancements allow designers to boost power density and performance in both new and legacy power electronics.

Wi-Fi Temperature And Humidity Sensor

Numato Lab's SenzConnect RHT module enables real-time temperature and humidity monitoring via Wi-Fi, ideal for applications in smart homes, agriculture, industry, and environmental monitoring. Its compact design supports cloud integration through MQTT and REST APIs for seamless automation. The module suits greenhouses, warehouses, offices, and smart cities. Easy

to configure with AP and STA modes, it offers secure data access via HTTPS and a web interface, ensuring flexible, remote environmental tracking across platforms.

18W Class-D Audio Amplifier

Nuvoton Technology introduces the NAU82110YG, a high-efficiency Class-D mono audio amplifier ideal for consumer applications like Bluetooth speakers, wireless doorbells, surveillance systems, and handheld gaming consoles. With a compact QFN20 form factor and ultra-low quiescent current, it ensures clear, powerful audio for battery-powered and space-constrained designs.

SiC MOSFET Six-Pack Modules

SemiQ Inc. has introduced 1200V SiC MOSFET six-pack modules, designed for compact, energy-efficient, and cost-optimised high-voltage systems. Ideal for applications like EV fast charging, AC/DC converters, energy storage, and renewable energy platforms, the modules offer fast switching, low losses, and high power density, with a 175°C junction temperature rating and easy integration features.

Torque And Angle Sensor

Sensor Technology has unveiled the SGR523, a digital rotary torque sensor designed for precision torque and angle monitoring. Utilising non-contact strain gauge technology, it offers high reliability with minimal maintenance. It supports dual-parameter monitoring for applications like
