Tiny High-Power Rectifiers

Vishay Intertechnology has launched 27 new surface-mount rectifiers in the compact DFN33A package, designed for commercial, industrial, telecom, and automotive applications. They

are ideal for high-frequency inverters, DC/DC converters, and protection

circuits. With optimised thermal performance, they feature wettable flanks for automated inspection, ensuring efficient system operation.

Android 15 On RISC-V

Andes Technology has successfully demonstrated Android 15 (Vanilla Ice Cream) running on RISC-V hardware, in collaboration with Imagination Technologies. This milestone high-

lights the potential of RISC-V for advanced applications across various devices.

The demonstration uses the Andes Voyager Board with the Qilai SoC and Imagination's GPU, showcasing high-performance Android with integrated graphics acceleration.

SiC Moulded Power Modules

ROHM has introduced new 4-in-1 and 6-in-1 SiC moulded modules

in a compact HSDIP20 package for onboard chargers in electric vehicles.

They support applications like EV charging stations, V2X sys-

tems, and PV inverters. The HSDIP20 package offers superior thermal performance, improving power density and reducing mounting area by 52%, ideal for high-power systems.

EMBEDDED

AI Supercomputer

Cadence Design Systems has unveiled its Millennium M2000 supercomputer, revolutionising AI-accelerated simula-

tion across industries like semiconductor design and drug discovery. Integrating Cadence's simulation software with Blackwell hardware enables breakthroughs in electronic design automation (EDA), autonomous systems, and life sciences, accelerating simulations and reducing processing time for a wide range of applications.

65-70W USB-C Modules

Pulsiv, a UK-based power electronics innovator, has unveiled advanced 65-70W USB-C modules at the PCIM 2025 conference.

Designed for built-in applications like wall outlets and furniture, with no inrush current, they run

full load for over 8 hours, ensuring thermal stability. Pulsiv's technology combines PFC and QR flyback for enhanced heat management, safety, and environmental benefits in consumer and industrial applications.

Power Supplies

TRACO POWER offers a range of power supplies that balance performance, reliability, and form factor to

meet the needs of industrial, medical, and telecom applications. The TXN

series provides cost-effective, durable solutions for industrial automation, while the TPI and TPP series offer high power density for space-sensitive environments like medical devices and telecom infrastructure. The TXO series delivers open-frame designs for large-scale deployments, and the TCI series ensures efficient heat dissipation for high-temperature settings.

TEST & MEASUREMENT

Fuel Cell Test Station

HORIBA has expanded its fuel cell test stations with the C05-LT 100W,

a compact, cost-effective solution for single-cell PEM fuel cell testing. Designed for research and

development, it offers precise control of temperature, pressure, and flow, ensuring reliable test performance.

**WE LOVE TO
