

Its plug-and-play software simplifies operation, requiring no coding. Key features include manual back-pressure regulation, humidifier sensing, and nitrogen crossover testing. Supported globally by HORIBA's service network, the C05-LT combines performance, affordability, and ease of use.

Embedded Security Testbench

Keysight Technologies, Inc. has introduced its next-generation embedded security testbench, a scalable PXIe-based solution for modern semi-

conductor and embedded system

security testing. Designed for developers and security labs facing complex threats, it simplifies workflows by integrating oscilloscopes, amplifiers, and trigger generators into a single platform. This modular, high-performance solution offers up to a tenfold improvement in security testing, streamlining vulnerability analysis.

T&M For Power Electronics

Design engineers in e-mobility, renewable energy, and AI data centres can benefit from Rohde & Schwarz's advanced T&M solutions, designed for

efficient, reliable power electronics.

Their tools,

optimised for high-speed switching and elevated temperatures, support next-gen WBG devices. Additionally, automated loadjump testing and passive component characterisation are showcased with the MXO 5 oscilloscope and LCX LCR meters.

Vector Signal Generator

Siglent Technologies' new SSG6082A-V vector signal generator targets research, testing, and production with

broad 9kHz to 8GHz coverage. Ideal for applications like 5G, WLAN, LTE, Bluetooth, and IoT, it supports complex modulations (QAM, FSK, PSK), real-time AWGN, MIMO, waveform sequencing, and S-parameter compensation. It is a versatile tool for modern RF testing in advanced communications and electronics development.

Lead-Free Solder Paste

SHENMAO America, Inc. introduces its PF606-P lead-free solder paste, designed for the advanced 'reverse

hybrid' board assembly process. This technique improves yield rates, thermal

cycling, and drop test performance by pairing SAC solder paste with BGA components featuring low-temperature solder balls. The PF606-P is ideal for next-gen advanced packages, enhancing product reliability and simplifying integration in high-performance electronics.

Durable Smart Ring Skin

Gabit has launched the Smart Ring Skin, a flexible silicone cover designed to protect the Gabit Smart Ring while adding style.

This lightweight accessory is perfect for active users, offering protection against scratches and wear without compromising sensor accuracy. Its sweat-proof, waterproof, and anti-slip features are ideal for workouts.

New Graphics Cards

ASUS has launched its new graphics cards featuring Nvidia GeForce RTX 5060 and 5060 Ti (8GB and 16GB),

ideal for gamers and creators.

Available in TUF Gaming, Prime, and Dual series, these GPUs support AI-enhanced

workflows, DLSS 4, and Ray Reconstruction. Optimised for compact builds, they feature advanced cooling, dual BIOS, and Nvidia Studio tools. GPU Tweak III software enables easy performance tuning for powerful, efficient gaming and creative applications.

Tool To Improve Supply Chains

Bosch has launched the Supply Chain Studio, a cloud-based platform enhancing supply chain visibility and operations. Key applications include

transport booking for service discovery and track-

ing, warehouse booking with a bidding system for storage, and smart warehouse for digital task execution. Bay and Yard Manager optimises truck flow and dock access, while the e-Distributor platform manages B2B orders and sales channels. It integrates with ERPs like Tally and aligns with India's Gati Shakti initiative.
