Bluetooth SoCs

Silicon Labs has launched the BG22L and BG24L Bluetooth low energy SoCs, designed for cost-sensitive, low-power IoT applications. The BG22L

features a 38.4MHz Cortex-M33F core with 24kB SRAM and 352kB flash, ideal for simple

BLE tasks. The BG24L, with a 78MHz core, 96kB SRAM, and 768kB flash, supports machine learning and AI workloads. Both offer secure, efficient solutions, with reduced GPIO pins and memory compared to their standard counterparts.

SiC MOSFETs

SemiQ Inc. has launched 1700V SiC MOSFETs for high-power conversion in applications like photovoltaic and

wind inverters, energy storage, EV charging, UPS, and induction heating. They are ideal for medium-voltage, large-scale applications, including automotive (AEC-Q101 qualified) and power modules for easy integration.

Current sensor ICs

Allegro MicroSystems has introduced two advanced current sensor ICs, the ACS37030MY and ACS37220MZ, optimised for automotive, industrial, and consumer applications. The ACS37030MY offers an ultra-fast response for wide bandgap

GaN devices, enhancing protection with a 40% smaller footprint. The ACS37220MZ, featuring high bandwidth

and low resistance, is a cost-effective solution for high-efficiency applications. Both sensors

provide precise current measurement, improved efficiency, and robust reliability, making them ideal for diverse power management systems.

Switching regulators

Traco Power's TSR 2N and TSR 3N series are non-isolated point-of-load regulators offering 2A and 3A output

currents. These regulators are ideal for industrial, consumer electronics, and embedded applications.

Housed in a compact SIP-3 package, they provide stable output, excellent thermal performance, and built-in protection features, making them cost-effective, reliable, and easy to integrate into existing designs.

Bluetooth modules for IoT

U-blox's new NORA-B2 Bluetooth low energy modules, integrating Nordic Semiconductor's nRF54L series SoCs,

offer versatile solutions for IoT applications like smart homes, industrial automation, and health-

care. With improved power efficiency, faster processing, and enhanced security (PSA Certified Level 3), these

modules support Bluetooth core 6.0. Options include variants tailored for different device needs, from high-power to cost-effective models.

Inductive sensor

Vishay Interotechnology's MCB RAIK060 inductive position sensor is ideal for industrial automation, robotics, motor

drives, conveyor control, and actuator position in drones, aircraft,

and eVTOLs. It also supports pitch and yaw control in wind turbines, cleaning robots, telecom antennas, and medical equipment. With immunity to magnetic interference, moisture, and vibration, the sensor offers high accuracy, resolution, and repeatability in harsh environments, making it suitable for various industrial and aerospace applications.

Single row BBI connectors and cables

Harwin has expanded its Kontrol range of industrial board-to-board interconnects with new single-row connectors

and cables. The 49 new products, including surface-mount connectors and double-

ended cable assemblies, offer versatile pin-count options (2-12) for demanding applications. These components are designed for flexibility and support high-performance specifications.

Compact indigo laser

Nuvoton Technology Corporation Japan (NTCJ) has introduced a 1.7W indigo
