

Ideal for telecom equipment and industrial drives, these chokes suppress common-mode interferences and support switch mode power conversion.

Applications include power conversion, drives, and noise filtering in demanding environments.

Terahertz wave oscillation devices

ROHM has launched its smallest terahertz (THz) wave oscillation and detection devices, utilising resonance tuning diodes (RTDs).

These devices have

applications in non-destructive testing, medical imaging, sensing, and ultra-fast communication technologies. Operating at room temperature with low power consumption, they offer a dynamic range of 40dB and are mounted in a compact PLCC package.

Thermoelectric generator modules

Same Sky's Thermal Management Group has launched thermoelectric generator (TEG) modules designed to

convert waste heat into usable power for diverse applications. Suitable for industrial processes, applications span industrial, consumer, and waste heat recovery systems.

Low-noise chip-scale atomic clock

Aerospace and defence developers need precise timing devices with strict size, weight, and power (SWaP)

requirements. Microchip's second-generation low-noise chip-scale atomic clock (LN-CSAC), model SA65-LN,

addresses this with a compact design, reduced height, and power consumption under 295mW. It integrates evacuated miniature crystal oscillator technology for low-phase noise and high precision, making it ideal for mission-critical applications like radar, radios, IED jamming, and autonomous systems.

eSIM solution

Infineon Technologies AG introduces the OPTIGA Connect Consumer OC1230, the world's smallest 28nm

eSIM solution, ideal for wearables, smartphones, tablets, IoT devices, and more. The eSIM supports multiple network

profiles, enhancing connectivity for smart homes, healthcare, and industrial IoT applications, with improved security and reduced PCB space.

EMBEDDED

Microcontroller board

Rajguru Electronics has introduced the ADIY UNO R3, a versatile

microcontroller board ideal for electronics projects. It is compatible with Arduino UNO R3 and is perfect for robotics, automation, IoT, and DIY

prototyping. It is suitable for various applications

with 14 digital I/O pins, 6 analogue inputs, and the ATmega328P microcontroller. Users can easily program it via Arduino IDE. It offers reliable performance, multiple communication options, and ample memory, making it an excellent choice for beginners and experienced developers.

Medical power supply

Advanced Energy Industries, Inc. has launched the NCF660, a convection-

cooled, CF-rated medical power supply designed for critical applications

in devices that contact the heart or bloodstream. Ideal for surgical generators, cardiac assist devices, and hemodialysis equipment, it reduces system size, weight, and engineering costs while enhancing safety and thermal management.

DIN-rail smart protection modules

RECOM's RACPRO1-4SP series introduces four-channel electronic circuit

breakers for enhanced control and protection in industrial applications. Remote reset,

hot-swap compatibility, and integration
