Modular human-machine interface

SECO and Raspberry Pi Ltd have introduced the SECO Pi Vision 10.1

CM5, a modular human-machine interface (HMI) powered by the Raspberry Pi compute module 5.

This 10.1 inch (25.65cm) platform is ideal for industrial applications, offering OEMs and startups a customisable, scalable solution for sectors like industrial automation, logistics, and smart retail.

Mini PC for AI

ASUS has launched the NUC 15 Pro mini PC, a compact powerhouse for developers. Featuring Intel Core Ultra processors, DDR5 memory, and Intel

Arc GPU, it excels in AI model

training, data visualisation, and multitasking. With Intel WiFi 7 for ultra-fast connectivity and enhanced security through Intel vPro and fTPM 2.0, this system supports seamless collaboration. Its upgradable design and quad-4K display support make it ideal for SMBs and creative professionals seeking efficiency and flexibility.

Preconfigured software building blocks

Congatec enhances aReady.COM with aReady.IOT preconfigured software building blocks for secure IoT connectivity from computer-on-modules (COM) to the cloud. This solution

simplifies embedded applications, accelerates innovation, and stream-

lines communication across devices using protocols like OPCUA, MQTT, and REST.

aReady.IOT supports remote monitoring, maintenance, and predictive analytics.

MANUFACTURING EQUIPMENT

Digital microscope

JB Microscope's digital microscope (JBM-PL5) is a high-definition inspection system replacing traditional

eyepieces with a digital camera.

Designed for precise analysis, it is widely used in electronics, manufacturing, medical devices, forensics, agriculture, and food inspection. Featuring 10x optical magnification, autofocus, and 3D noise reduction, it ensures clear imaging. With HDMI/USB output, photo/video capture, and remote operation, it suits laboratory and industrial applications requiring detailed examination and documentation.

TEST & MEASUREMENT

Design and test solution for LPDDR6 memory

Keysight Technologies has launched a design and test solution for LPDDR6

memory, enhancing AI, mobile, and edge device validation.

Automated compliance testing, low-noise technology, and advanced data analysis tools reduce validation time and improve signal integrity. The solution, which includes

transmitter/receiver test applications and the Memory Designer bundle, supports high data rates and power efficiency, benefiting mobile devices, AI, automotive systems, and data centres while ensuring system stability and compatibility.

Signal analysers

Anritsu Corporation has released software upgrades for its signal analysers (MS2830A, MS2840A, MS2850A), enhancing spectrum measurement

capabilities to include millimetre-wave bands via external mixers from VDI or Eravant. These

advancements enable precision in detecting subtle human surface changes, enhancing healthcare, automotive systems, and facial recognition security. The analysers support ultra-wideband millimeter-wave sensors with features like extended spectrum measurement, image-response-free performance, and easy setup.

DC power supply with built-in multimeter

Revine Tech has launched the RTPM series, a compact DC power supply

with an integrated multimeter ideal for engineers, technicians, and researchers. Its versatile applications include electronics labs, manufacturing

facilities, and educational institutions, offering reliable power supply and measurement functions. The device supports voltage, current, capacitance, and resistance measurements with built-in safety features for secure operation.
