India's Electronics Surge Plateaus At 4% Of Global Market Share

India's electronics sector has seen remarkable growth, with domestic production rising from ₹1.90 trillion in FY15, approximately ₹5.84 trillion in FY20, to ₹9.52 trillion in FY24, reflecting a staggering annual growth of 17.5%. Despite this impressive progress, the sector still accounts for only 4% of the global electronics market, as highlighted in the Economic Survey 2024-25.

Global Electronics Industry Recovery Faces An Uncertain 2025

Although global demand reached a neutral level of 100 in the diffusion index, new orders (102) and shipments (104) saw modest increases, but the backlog index remained low at 91. Over half of manufacturers faced rising labour (52%) and material (51%) costs. Persisting recruitment difficulties, cost pressures, and declining profit margins make it a challenging 2025.
