1 IF YOU LIKE YOUR HEALTH, PUT A RING ON IT!

Beyoncé had a point—if you like something, put a ring on it. And who does not like their health? A Bengaluru-based startup is making wellness wearable with a smart ring that tracks cardiovascular health.

Sensio's smart ring

Developments have been smart for quite some time now, popularised by the Apples and Samsungs of the world, but what if your jewellery started getting smart too? Wearables startup Sensio has developed a screenless device that tracks multiple health parameters through a smart ring.

Founded in 2019 by Dr Venkatesh Vadde, Kenneth Joel, and Mohan Prabhakar, Sensio Enterprises has designed and developed the Orbyt Smart Ring. Vadde, an electronics engineering professor turned entrepreneur, told EFY, “I met my co-founders at PES University. Together, we decided to focus

on sensors and health-related solutions and built Sensio Enterprises.”

The smart ring is equipped with medical-grade, AI-enabled sensors for real-time monitoring of essential health parameters, including ECG (electrocardiogram) and PPG (photoplethysmogram) for cardiac health monitoring, and SpO₂, or oxygen saturation, for respiratory health.

The interior features skin-friendly resin and gold-plated ECG electrodes, while the exterior comprises medical-grade stainless steel with a titanium carbide coating. Designed for aesthetics and functionality, the ring is available in sizes 4-13 and comes in stellar black, gunmetal grey, rose gold, auric gold, and steel silver colours, priced at ₹20,000.

“Our smart ring is equipped with sensors capable of monitoring multiple vitals. It tracks heart, respiratory, and blood oxygen levels, and temperature. It offers ECG monitoring, which is our key differentiator. The ring also includes an inertial sensor for activity tracking and can monitor sleep patterns,” says Vadde.

In an age where screens dominate our lives, Vadde believes that a screenless smart ring collects all health-related data even while sleeping, unlike a smartwatch, which is not comfortable to wear while sleeping.

The startup has developed a proprietary feature called In-Loop, which monitors the health of family members remotely and sends alerts when intervention is required. This feature lets users present comprehensive health data to doctors for accurate diagnoses and treatments.

Sensio integrates a high-quality
