web page to the Arduino USB serial port, while Fig. 9 shows the web interface for sensor data display. Similarly, Fig. 10 shows the data logging module and Fig. 11 shows the downloaded CSV data.

This system highlights how the integration of sensors and web technologies can enable real-time data capture and recording. The setup is modular, user-friendly, and adaptable to various types of sensor input, making it ideal for applications in education, research, and real-world problem-solving. **EFY**
