

CYCLONE FX

AUTOMATED PROGRAMMER, TEST & DEBUG INTERFACE

Advanced, high-speed, in-circuit stand-alone programmer for internal & external flash.

Includes top-end speed, storage, automation, & security features. Supports ARM® Cortex and many 8-/16-/32-bit NXP® architectures.

Simple To Configure & Operate

Stores hundreds of images in internal Cyclone memory and more on an SD card. The touchscreen allows easy image selection. A single button press can launch programming.

High-Speed Device Programming

Supports extremely high-speed programming of ARM devices from many manufacturers, as well as a variety of NXP 8-/16-/32-bit devices.

Secure Stand-Alone Programming

Protects your IP via industry standard RSA/AES image encryption linked to only your Cyclones. Plus: anti-tamper technology, limitations to programming count, failures, and date range. Once configured, can operate with or without a PC.

Massive Internal & Expandable Storage

1GB internal memory and an SDHC slot for expandable memory. No practical limit to the number of programming images it can hold.

Advanced Automation & Gang Programming

Includes Advanced Automation License for launch and control of multiple Cyclones. Cyclones can be easily set up for gang programming of devices.
