

Practical Thinking: Smart Energy Meter-Equipped with Diotec Voltage Regulator LDI734C-3.3EN

A smart energy meter is an advanced version of a traditional electricity meter that records energy consumption in real-time and communicates data to consumers and utility companies. It helps in better energy management, cost savings and efficient electricity distribution.

By incorporating a low quiescent current and low drop-out voltage LDO, the smart energy meter can achieve long battery life, high power efficiency, reliability, and cost-effectiveness, all of which are essential for the practical deployment and sustainable operation of energy meters in a wide range of applications.

Extended battery life is a common design requirement in the smart energy meter. Using an LDO is a common way to generate a regulated voltage from the battery. This is especially true with a single-cell lithium-ion (Li-ion) battery that outputs 4.2V when fully charged. The LDI734C3.3EN specifies a typical dropout voltage of 170mV when the output current is 300mA and the output voltage is 3.3V with integrated current limiting and thermal overload protection. The low quiescent current 60uA extend the battery life. Diotec LDI734C-3.3EN is capacitor free LDO

Think It... We Build It...

Calixto
systems

Your Trusted

Partner In Embedded Innovation

- ✓ Diverse SOM lineup (Renesas, TI, NXP, ST, Synaptics, Xilinx)
- ✓ Custom Design & Development Support
- ✓ In-house R&D & Manufacturing Facilities
- ✓ Production-ready Carrier Boards
- ✓ Fast Turnaround & Global Shipping
