

are collected and sent to Edge Impulse by connecting the sensor to the IndusBoard Coin. Connect the sensor as per the circuit diagram (refer to Fig. 2), then upload the data forwarder code to the IndusBoard Coin (QR code provided at

the end of the article). After that, install Edge Impulse on a laptop and create a free account.

EFY note. Edge Impulse offers both paid enterprise-level accounts and free experimental accounts. The free version is used in this device.

Next, create a new device profile on Edge Impulse and run the Edge Impulse Data Forwarder. Open the terminal (Linux/macOS) or CMD (Windows) and enter the command:

```
edge-impulse-data-forwarder
```

A login prompt will appear for
