

need strong AI performance in small spaces. IBASE's CMI300-1001 edge

computer packs Intel Core processors, robust net-

working, and durable design into a compact form. It gives system integrators reliable, scalable edge AI power for industrial, video, and automation environments.

MANUFACTURING EQUIPMENT

Integrated coating system

Electronics manufacturers want greener processes without lower-quality. Nordson and Actnano's

integrated coating system applies PFAS-free nanoGUARD coatings to protect circuit boards without the need for

high-energy ovens. It reduces power use and simplifies production, helping factories meet sustainability goals while keeping throughput and product performance high.

TEST & MEASUREMENT

Sensor

Inspecting small electronics precisely without contact is difficult. Hikrobot's

new 3D laser profile sensor captures precise, real-time 3D data of objects like PCBs and

batteries without physical contact,

using 40nm laser triangulation. Hikrobot's 3D laser profile sensor solves this by capturing accurate, real-time surface data of PCBs and batteries. It ensures reliable, repeatable inspection and speeds up quality control in fast manufacturing environments where precision determines yield and safety.

Hikrobot

Oscilloscopes

High-speed digital and AI systems require fast and precise signal capturing for testing. Tektronix's 7 series

DPO oscilloscope delivers ultra-low noise, low jitter, and high bandwidth visibility.

It helps engineers analyse transients, validate serial interfaces, and debug complex designs quickly in research labs and advanced electronics testing environments.

Tektronix

<https://www.tek.com>

Vision system

Manufacturers struggle with inconsistent quality checks. Keyence's VS series vision system uses AI to detect defects quickly and accurately, reducing false

rejections and boosting productivity. With easy setup and adaptive light-

ing, it lets factories automate inspections, prevent defective shipments, and maintain high-quality output without complex programming.

Keyence

Analyser

Engineers developing 5G, AI, or PCIe

7.0 hardware struggle to test extremely fast signals. Rohde & Schwarz's ZNB3000 analyser enables accurate

measurement up to 54GHz, providing clear insight into high-speed

interconnects and RF components. It shortens validation time for researchers and production teams building next-generation communication systems.

Rohde & Schwarz

<https://www.rohde-schwarz.com>

Oscilloscope

Data centres moving to 800G/1.6T speeds need faster optical testing equipment. Anritsu's MP2110A-080 upgrade adds a 60GHz oscilloscope that checks

200G-per-lane transceivers. It enables engi-

neers to validate signal clarity quickly and cost-effectively, supporting AI and telecom infrastructure with higher reliability and testing throughput.

Anritsu

<https://www.anritsu.com>

Battery simulator

Testing electric vehicle and battery storage systems safely is hard with live batteries. Pickering's PXI battery simu-

lator mimics real cells up to 5A, letting engineers test charging, ageing, and fault conditions

without risk. Its modular design scales easily, speeding up safe, flexible battery management testing for automotive and energy industries.
