

Depaneling Machine: SAR-Nano

Advantage of German technology at attractive prices

The SAR-Nano depaneling machine from SCHUNK is a compact powerhouse engineered for performance and precision. Designed with German engineering excellence, it offers an economical, flexible, and high-quality solution for the electronic industry.

With decades of expertise in depaneling technology, SCHUNK delivers solutions across automotive, aviation, energy, industrial electronics, medical, communication, and data technology sectors.

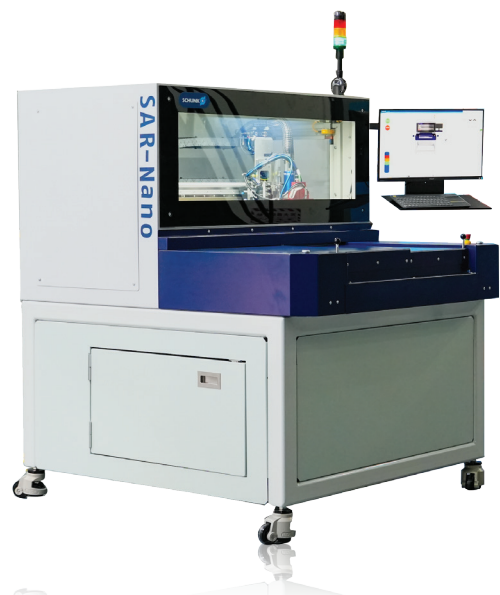

Why Choose SAR-Nano?

- + Ideal for medium to high mix production
- + Suitable for small to medium volumes
- + Offers modularity and upgradability for evolving production needs
- + Integrates seamlessly with existing workpiece holders like MAGNOPLATE or custom DIY solutions
- + Ensures precise milling in X-, Y-, and Z-directions with state-of-the-art drive and linear motor tech
- + Speed of axis: 1000mm/s.
- + Machines are with SCHUNK Own make axis system

Your added value

- + Highest milling accuracy with high-precision linear motor axes
- + Panel feeding available with two shuttle axes, which reduces the down time of loading and unloading.
- + Shortest cycle times with reduced dead time
- + Maximized uptime with quality components & simplified design
- + Ergonomic operation even for tall assemblies
- + Scalable system – start simple and expand as needed
- + Fast delivery via modular production system
- + Quick support: Sales and technical team available in India.

Introductory offer valid until 31st December 2025
