

transmitters and cables, traces signal issues, and supports UHD, HDR, and immersive audio formats. By unifying electrical performance and compliance under HDMI 2.2, engineers can ensure reliable performance and achieve a faster time-to-market.

## Unified operating system

Liquid Instruments has launched MokuOS 4.0, a unified operating system for its Moku hardware lineup.

Featuring a redesigned interface, expanded instrument support, and full compatibility with the new Moku:

Delta, it lets engineers run multiple instruments simultaneously from a single system. Enhanced clocking, cloud integration, and improved waveform control make complex measurements and high-performance testing simpler and more flexible than ever.

## MOVES

### All-terrain NEV circuit

BYD has opened its first all-terrain circuit in Zhengzhou, blending racing, training, and adventure for new energy

vehicles. Visitors can tackle sand dunes, water cross-

ings, off-road tracks, and precision driving zones, all in one location. Featuring extreme driving challenges and experiential fun, the venue promotes NEV culture while showcasing BYD's technology. Future circuits in Hefei and Shaoxing are planned.

## MISCELLANEOUS

### AiUAC

Industrial automation is evolving to be open, flexible, and future-ready. ASRock Industrial's AiUAC offers

vendor-independent, event-driven control across distributed edge nodes,

bridging machines, protocols, and systems. With built-in telemetry, robotics support, and com-

patibility with emerging standards, AiUAC enables real-time insights, predictive maintenance, and scalable deployment, helping industries move from rigid, centralised setups to open, adaptable, and resilient automation platforms.

### Memory kit

Biwin unveils its Black Opel OC Lab Gold Edition DW100 DDR5 192GB kit, built for AI, LLMs, and heavy

computing. Combining massive capacity with low-latency performance, it enables stable overclocking

and memory scaling for data-intensive workloads. Compatible with AMD platforms and top motherboards, the kit ensures fast, reliable access to large datasets, high-performance simulations, and seamless multi-threaded computing.

### Signage player

IBASE Technology unveils the SW-602-N, a rugged, waterproof, and fanless digital signage player designed for continuous outdoor use. Its

durable IP65 design and silent operation handle dust, rain, and extreme temperatures, while dual HDMI outputs and versatile

connectivity let businesses power dynamic displays anywhere—from transit hubs to retail spaces, delivering reliable, high-quality content with minimal maintenance and maximum flexibility.

### Palladium-copper membrane

Tanaka Precious Metal Technologies has developed a palladium-copper membrane that purifies hydrogen at

300°C, matching production temperatures. Unlike conventional membranes that require extra heating, this innova-

tion reduces energy use, lowers CO<sub>2</sub> emissions, minimises equipment oxidation, and enables compact hydrogen purification systems.

### SoC generator platform

InCore Semiconductors is reimaging chip design with its SoC generator platform. Instead of months of costly

effort, engineers can now create complete, application-ready SoCs in minutes. By automating inte-

gration of cores, interconnects, and software, it slashes risks and accelerates innovation, empowering IoT, edge AI, and embedded developers to focus on products, not chip design.

### Remote camera controller

Panasonic unveils the AW-RP200GJ, a next-gen remote camera controller set to redefine live production. Its dual

joysticks, first-ever macro system, and 20 assignable switches let operators control

multiple cameras seamlessly. With IP-ready connectivity, a 17.78cm (7-inch) touchscreen, and workflow automation, it streamlines complex shoots, providing crews with increased speed, precision, and flexibility for high-value broadcasts and multi-camera events.
