

without being tied to a single institution. It is a whole new career possibility that could redefine the trajectory of educators globally.

Can educators opt out or monetise their avatars independently?

Faculty have full flexibility to decide how and where their avatars are used. Participation is voluntary and currently limited to in-house faculty, who can opt in or out at any time.

How have faculty responded to digitising their teaching style?

Faculty see it as a way to amplify their impact globally while retaining recognition and ownership. They currently rate the experience 6 out of 10 but expect higher satisfaction as the technology improves.

Could innovations like neuromorphic chips or quantum computing

play a role down the line?

Definitely. Neuromorphic chips can make the system far more energy-efficient, while quantum computing could unlock personalised learning simulations at an unprecedented scale. While there is potential for these emerging electronics to impact AI at scale someday, their practical adoption is still speculative.

What safeguards are in place to prevent misinformation, bias, or hallucination?

We use rigorous moderation pipelines, real-time fact-checking, and human-in-the-loop verification for sensitive topics. All AI is trained exclusively on proprietary faculty content and instructions, with strict restrictions preventing it from generating information outside this database. This minimises hallucinations or misinformation. Access is limited to enrolled students via web

or mobile apps, and cloud infrastructure ensures security. Because faculty train the models directly, they retain full control over avatar responses, guaranteeing accuracy in specialised subjects like strategy or venture capital.

Any final insights for the wider electronics and engineering community?

AI education relies on deep electronic innovations—DSPs, accelerators, edge devices, and neuromorphic chips. Engineers can significantly shape the classrooms of tomorrow, making education more accessible, effective, and engaging worldwide. **EFY**
