COMPONENTS

3D magnetic Hall sensors

Infineon's third-generation XENSIV 3D magnetic Hall sensors combine precision, safety, and efficiency in one

compact solution. Offering 3D magnetic field measurement,

they replace multiple sensors, simplify design, and maintain long-term accuracy. ISO26262 compliance with built-in diagnostics ensures safety-critical readiness, while low-power wake-up mode boosts efficiency. Versatile for automotive, industrial, and consumer use, they deliver reliable performance in harsh conditions, reducing complexity, speeding development, and enabling smarter, safer systems.

SSD series

Kingston Technology has expanded its NV3 PCIe 4.0 NVMe SSD series

with a new compact M.2 2230 form factor. Designed for laptops and handheld gaming

consoles, it provides faster load times, efficient power usage, and enhanced responsiveness. Ideal for creators and gamers, the NV3 2230 supports storage-heavy tasks and includes software tools for drive management and data security.

Hybrid couplers

KYOCERA AVX has introduced ultra-miniature ITF hybrid couplers

designed for next-gen high-frequency wireless systems. Small in size, the

DB0402 series offers high power handling, low insertion loss, and robust reliability even in harsh environments.

Ideal for 4G/5G/6G, MIMO, GPS, SATCOM, and industrial RF applications, these couplers ensure signal integrity, space efficiency, and consistent performance for mission-critical wireless innovations.

64-bit microprocessor

Renesas has introduced the RZ/G3E, a 64-bit microprocessor designed for

edge AI and human-machine interface (HMI) applications in smart factories, hospitals, retail, and buildings. It supports

Full HD video, real-time sensing, and fast connectivity, enabling AI-driven vision, voice, and analytics. With low-power operation, high-speed interfaces, and robust processing, it targets next-generation embedded devices needing intelligent, responsive, and connected performance at the edge.

SIDACtor protection thyristors

Littelfuse has launched the Pxxx0S3H series SIDACtor protection thyristors, the first 2kA surge-rated device in a compact DO-214AB package. Designed for AC/DC power line protection, it offers long-term reliability without

performance loss, even after repeated surges. With its high

surge capability in a compact footprint, it's ideal for EV chargers, solar inverters, UPS systems, and industrial applications, delivering robust,

space-saving protection for demanding modern systems.

FPGAs

Microchip has strengthened its space-ready FPGA portfolio with two milestones—the RT PolarFire RTPF500ZT

FPGA earning MIL-STD-883 Class B and QML Class

Q qualification, and the release of RT PolarFire SoC FPGA engineering samples. Built on nonvolatile technology, these devices deliver high density, low power, and radiation tolerance for extreme environments. Ideal for satellite, avionics, and payload systems, they simplify design, cut costs, and optimise SWaP while enabling in-flight reprogramming.

ESD protection diodes

Nexperia has launched a new 1V ESD protection diode series for ultra-fast

USB4 and Thunderbolt interfaces. Designed for smartphones, laptops, and high-speed systems, they provide

robust protection while maintaining exceptional signal integrity. With ultra-low capacitance, minimal insertion loss, and a space-saving package,
