Battery cell controller

NXP's BMx7318/7518 battery cell controller IC family delivers an 18-channel Li-ion solution for EVs, ESS, and 48V systems. Its advanced architecture

cuts component count by up to 50%, lowers costs, and boosts monitoring accuracy. With high-

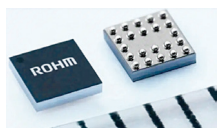

current balancing, robust EMI immunity, and ASIL-C safety, it ensures reliable, scalable battery management, streamlining design and enabling greener, more efficient mobility and energy solutions.

MOSFETs

Rohm's new AW2K21 ultra-compact MOSFET delivers faster, safer charging in smartphones, wearables, and tablets,

while slashing board space and complexity. By integrating two MOSFETs

into a single 2.0mm package, it supports bidirectional current control with ultra-low resistance, boosting efficiency and reliability. Offering over 80% footprint savings compared to traditional designs, it is ideal for USB protection, battery safety, and load switching in today's high-performance portable devices.

Wire-wound automotive inductors

TDK has expanded its ADL4524VL wire-wound inductor series for

automotive power-over-coax (PoC) systems, now in mass production. Compact in size, these inductors help

shrink automotive camera and ADAS designs by replacing multiple components with one. Offering wide

frequency coverage, high thermal stability, and reliable filtering, they simplify wiring, cut weight, and boost efficiency, ideal for next-gen, space-saving in-vehicle electronics.

CCD linear image sensor

Toshiba has launched the TCD2728DG, a high-resolution CCD linear image sensor designed for

sharper, cleaner scans in A3 multifunction printers and industrial line-scan cameras.

Offering faster

data rates and 40% less noise than its predecessor, it enables high-speed, high-quality image processing. With built-in circuitry for simplified integration, it supports demanding applications, ranging from office document handling to semiconductor inspection and food sorting, with precision and efficiency.

Automotive power inductors

Vishay Intertechnology has introduced two rugged automotive power induc-

tors, the IHD1107BBEV-2A and -3A, designed to withstand

extreme heat of up to +180°C without compromising performance. With high isolation, AEC-Q200 qualification, and custom options, they are primed for EV, HEV, and ICE power

systems, from converters to chargers, meeting the demands of modern electrified mobility.

Four-channel hybrid ReDrivers

Diodes Incorporated has launched two 3.3V quad-channel hybrid ReDrivers with integrated DDC listeners, enhancing HDMI signal integrity and

reducing power consumption for next-generation video formats, such as 8K. Designed

for laptops, desktops, TVs, consoles, docking stations, and active cables, these devices ensure clear high-resolution video over long traces.

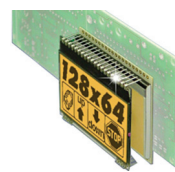

They offer flexible control, dual-mode DisplayPort support, and smart power management for space-constrained, high-performance consumer and computing applications.

Flat display series

DISPLAY VISIONS has expanded its EA DOG flat display series, combining ultra-low power use with compact

form for handheld and battery-powered devices. Running on a single 3.3V supply, it consumes just microamps in

standby, with an optional low-draw LED backlight. The series supports both text and graphic displays, offering design flexibility, long-term availability, and easy integration for space- and power-sensitive applications.
