Dual-head 3D scanner

SmartRay's ECCO X 025 Dual-Head redefines 3D inspection with a dual-camera architecture that virtually eliminates occlusion, ensuring

complete, high-speed, metrology-grade scanning. Delivering up to 40kHz scan rates

and 100% coverage, it excels on reflective, complex surfaces in automotive, semiconductor, and electronics manufacturing, boosting accuracy, reliability, and throughput where traditional single-head sensors struggle.

Mid-size inspection platform

TRI has introduced its Size M configuration, which boosts SPI and AOI platforms for larger PCB applica-

tions, measuring up to 660 × 690mm. Suitable for EV batteries, server boards, and power modules, it delivers precision, speed, and Industry 4.0 compat-

ibility, offering a cost-effective, plug-and-play upgrade for smarter, broader inspection without overhauling production lines.

TEST & MEASUREMENT

Electromagnetic interference test receiver

Keysight Technologies has upgraded its PXE EMI receiver with 1GHz real-time, gapless measurement, enabling EMI scans from 30MHz to 1GHz in a single step. The system's 1GHz TDS bandwidth and N9048BSPU processor

deliver faster diagnostics, higher sensitivity, and CISPR-compliant precision, cutting EMC test times from hours to minutes while ensuring no transient signals are missed.

Waveform generators

RIGOL has launched its DG5000 Pro Series waveform generators in India, offering up to eight fully isolated

500MHz channels for independent or synchronised outputs.

It delivers ultra-high fidelity for R&D, power electronics, 5G, and EMI/EMC testing, backed by a 25.65cm (10.1-inch) HD touchscreen and remote control.

Memory tester

Teradyne's Magnum 7H memory tester targets the booming HBM market with high-speed (up to 4.5Gbps), high-

parallelism, and full test coverage across HBM2E to HBM4E.

Supporting pre- and post-singulated testing, 9216 digital pins, and 1.6x throughput boost, it ensures quality and scalability for AI, GPU, and cloud-driven HBM production while cutting test costs in high-volume manufacturing.

Generative instrumentation

Liquid Instruments' new generative instrumentation uses AI to let engineers create custom test setups with simple language commands. Integrated into

real-time FPGA-based tools, and adapts on demand, slashing setup time, boosting flexibility.

MokuOS and powered by Moku:Delta, it automates complex configurations, builds

MISCELLANEOUS

Servo motors

Panasonic Industry, a division of Panasonic Life Solutions India, has introduced the MINAS E7 servo motor

series to boost India's automation drive. Compact yet powerful, it offers faster setup, higher precision, and improved speed for space-constrained manu-

facturing. With easy integration into smart factory systems, it supports a wide range of sectors, from packaging to semiconductors. The E7 embodies Panasonic's push toward smarter, high-performance, and accessible automation for Indian OEMs.

IoT-enabled MPPT solar charge controllers

Everon Energy Systems has launched its SIM-12-24 series of IoT-enabled MPPT solar charge controllers, offering smart

and high-efficiency energy management for residential and commercial solar setups. Compact, lightweight, and robust, they deliver up to

93% conversion efficiency with customisable battery settings. Featuring Wi-Fi and 4G connectivity for remote monitoring via mobile app, these controllers combine intelligent performance, safety protections, and reliability, making them ideal for both off-grid and scalable solar installations.
