

ESSENCE

3D AOI + SPI for PCB Inspection. Now Smarter with Training Manager.

Witness a new Horus era. Born from proprietary neural networks, Horus is the first AI-native platform designed to perform both AOI and SPI with true 3D precision. It inspects faster, sees deeper, and continuously adapts the error classification, reducing false positives by a factor of ten and now featuring a new Training Manager feature, enabling tailored inspections with minimal manual input.

Horus is more than a machine. It's an evolving architecture with configurable elements. Add XP for faster throughput, HD for ultra-high-resolution inspection, ITU to inspect both sides of PCBs, or DUO for dual-lane productivity. Every element integrates seamlessly, making Horus a truly modular AOI solution, tailored to your line.

Driven by AI. Guided by vision.
