

Will Cyient Semiconductors focus only on design, or will it also cover manufacturing?

We are currently focused on design and development, including architecture, verification, tape-out, packaging, and final test. We partner with foundries, such as TSMC and GlobalFoundries, for manufacturing. For assembly, we rely on partners, mainly in Taiwan. However, we own the final test phase to ensure quality. As India strengthens its OSAT and fab capabilities, we will look at incorporating them into our ecosystem in the future.

What sectors will Cyient Semiconductors primarily target with its turnkey ASIC solutions?

Our focus is on sectors that require high integration, low power consumption, a small form factor, and cost efficiency, mainly in industrial applications such as industrial automation, medical, and data centres. These applications benefit greatly from combining intelligent computing, power electronics, and analogue functionalities in custom silicon, which we aim to deliver.

What is the current location and team setup of Cyient Semiconductors? Are there plans for new facilities?

Our headquarters are in Hyderabad, where most of our team is currently based. We are expanding globally for sales, with teams in the US, Taiwan, and Japan. We also have a strong R&D partnership with IMEC in Europe. In terms of facilities, we plan to consolidate and expand our R&D operations within Hyderabad rather than setting up new centres elsewhere.

What is the customer profile of Cyient Semiconductors, and what kind of support do you provide across the product lifecycle?

Our customer base ranges from

startups to Tier 1 OEMs. For example, we are working with Azimuth AI in India on energy metering. We support customers throughout the entire development cycle, from architecture definition to design, verification, tape-out, post-silicon validation, packaging, final testing, and delivering turnkey silicon.

How will Cyient Semiconductors differentiate its ASIC turnkey offerings from competitors?

What sets us apart is our ability to deliver full turnkey solutions from architecture to final tested silicon. Unlike most competitors, we offer end-to-end services, managing the entire supply chain and simplifying complex logistics for customers. With Cyient's 30+ years of heritage and long-standing partnerships, such as the one with IMEC since 1998, we bring both experience and stability to the table.

How does this new subsidiary align with India's national agenda for building a robust semiconductor ecosystem, as outlined by the Ministry of Electronics and IT (MeitY)?

Our subsidiary aligns very closely with the government of India's semiconductor vision, which emphasises building a resilient and innovation-driven ecosystem. The aim is not only to meet domestic demand but also to export high-value, high-impact technologies. By focusing on custom chip design, we leverage Indian talent and collaborate globally across the semiconductor value chain. This supports India's ambition to become a strategic global player in the semiconductor industry. **EFY**

Pico PC Scopes

– Proven with Performance

Pico Technologies, UK is a market leader in PC Oscilloscopes – the modern alternative to traditional bench top oscilloscopes. Pick your choice from Pico's wide range for different applications supported with next-generation user interface (available for Windows, Mac & Unix) for any real-time PicoScope. PicoScope 7 software has all the analysis tools you need to get answers quickly, whether carrying out a simple test, or debugging a complex design. Go for your Pico, a preferred choice of many with assured support from Qmax, your reliable sourcing partner.

Ultra Compact 2000 series
– 10MHz to 100MHz

High performance 3000E series
– 100MHz to 500 MHz

General Purpose 3000D series
– 50MHz to 200MHz with/without MSO

High resolution 4000 series
– 5MHz to 20MHz

Flexible resolution 5000 series
– 60MHz to 200MHz

High performance 6000 series
– with flexi resolution & ultra deep memory
– 300MHz to 3 GHz

Unique 9000 series
– 5GHz to 33GHz with effective sampling up to 5TS/s
