

Can India Shift From ASSEMBLY LINES TO OWNERSHIP OF The Designs And Products?

Make-in-India is NOT assembled in India. Can the country shift from assembly lines to ownership of designs and products? Despite strong talent and policy support, India's electronics sector is booming in scale but lacking in innovation. As the world realigns its supply chains, can we finally emerge as the global nerve centre of complex modern multinational supply chains, along with developing its edge in design and IP?

(From left to right): N. Kishor Narang, Founder, Namix Technologies; T.S. Shankar, Sales Director, Analog Devices; Bhartendu Mishra, Managing Director, Arrow Electronics, India; Jaswinder Ahuja, ex-Corporate Vice President of Cadence Design Systems (India); and Josh Foulger, President, Electronics, Zetwerk Manufacturing

Crisis often begets opportunities. From the US-China trade war to the pandemic, supply chain shocks and geopolitical tensions, the world's overdependence on China has been exposed. The world is in pursuit of new business models. Global business dynamics are already undergoing a significant shift, as nations are now devising exit strategies from China and aiming to become more self-reliant.

India, a young nation renowned

for its innovative spirit, can take the lead in shaping a new work culture. India, with the right blend of physical and virtual infrastructure and conducive government policies, can emerge as the global nerve centre of complex modern multinational supply chains. The recent Covid-19 crisis and changing geopolitical scenarios have presented India, and especially the ESDM (electronics system design and manufacturing) ecosystem, with an unexpected, longer-horizon

opportunity to expand its manufacturing and R&D base and play a larger role in revamped global supply chains, spawned by the sudden but inevitable global rush to reduce economic dependence on China.

However, despite its global dominance in smartphone usage and 5G adoption, India still imports much of what it consumes. The real question is: can India move from being a consumer to a creator of intellectual property (IP), products, and global
